Valentine Azolibe

Full-Stack Developer · React & Django · Tech Educator & Author · Co-Founder of Collan

Lagos, Nigeria · +234 704 949 5832 · valentine@collan.dev · valentinecodes.vercel.app · github.com/Mexican1922 · LinkedIn · x.com/Vibe_with_val

Summary

Full-stack developer who builds interactive web products and teaches young people to build them too. 3+ years shipping production applications with React and TypeScript on the frontend and Python and Django on the backend: dashboards, user accounts and authentication, real-time features, personalised recommendations, and payment flows. Co-founded Collan, a community platform that passed 2,000 users in September 2026. Taught a summer coding class where every student built their own website, and wrote the Future Makers textbooks now used to bring tech education into Nigerian secondary schools. Shipped and posted work on X for 100 consecutive days of building in public. Available for hybrid contract work in Lagos.

Experience

Tech Instructor & Curriculum Author · Apex Tech

Lagos · August 2026 – Present · techplaybook.apex-techhub.com

- Taught the Apex Tech Summer Lessons (August – September 2026) to a class of about 10 young students, taking them from no coding experience to each building their own website by the final lesson.
- Wrote **The Future Makers** Frontend Development Set (HTML, CSS, JavaScript) and Backend Development Set (Python, SQL, HTTP): project-based textbooks with companion write-in workbooks, on sale in print and as ebooks since October 2026.
- Now partnering with Apex Tech to take tech education into secondary schools across Nigeria, using the Future Makers books as the curriculum.

Co-Founder & Full-Stack Developer · Collan

Remote · November 2025 – Present · collan.dev

- Co-founded a social networking platform for techies with a community feed, project marketplace, live sessions, and real-time chat. Launched V1 in March 2026, crossed 1,000 users in the first two months, and passed 2,000 in September 2026; V2 and a mobile app are in development.

Full-Stack Developer (Freelance) · Self-Employed

Remote · January 2023 – Present

- Built and shipped Fredan Textiles: a React + TypeScript storefront with a Django REST backend (products, orders, gallery, newsletter) that the owner runs entirely through the Django admin, live on a custom domain.
- Built Apex TechHub, an EdTech academy platform with course browsing, enrolment, and integrated payments.
- Built acruvia.co, the marketing site for a cross-border marketplace connecting SMEs with vetted accountants; now building the product web app (job posting, accountant bidding, hiring).
- Delivered production client sites including Kings Tech Solutions (smart energy and security company operating across 12+ states) and Crestforge Construction (Squarespace, delivered in one weekend with no prior platform experience).
- In progress: a school portal mobile app, and a portfolio with a custom content admin (React + Django REST) for a motion designer.

Frontend Developer Intern · Ibs Golden

Ikeja, Lagos · January 2025 – December 2025

- Built frontend interfaces with a development team using modern React and component-driven architecture.

Selected Projects

- **UDA, music streaming platform** (2026): React + TypeScript frontend with a Django REST backend covering accounts, library, listening history, and a personalised recommendation engine; full auth lifecycle with email verification; installable PWA. uda-obi.vercel.app

- **MeterMate, household energy dashboard** (2026): Next.js 15 + Supabase with real-time sync, member invites, household management, and payment approvals. naija-metermate.vercel.app
- **PadiPay, fintech wallet PWA** (2026): mobile-first digital wallet covering money transfers, airtime, data, and bill payments across 14 typed screens with a dedicated service layer. naija-padipay.vercel.app
- **StockFlow, inventory SaaS** (2026): role-based access control, Firebase auth with Google sign-in, live Firestore sync, and English/Portuguese support. products-inventory-mgmt.vercel.app
